REGULATIONS AND FRAMEWORK

#politics

Ethics committees: they monitor and oversee the progress of innovations in living organisms and define the boundaries of research projects. State prohibition: the State has the right to veto any research project conducted on its territory, regardless of the nature of its funding.

Exceeding planetary limits and the scarcity of material and energy resources force us to choose differently. A joint committee, partly drawn at random, sits on the board of directors of each industrial zone to make collective decisions. Innovative rules are emerging (single mandate, representation of future generations, etc.).

ADMINISTRATIVE VOCABULARY

#politics

The reign of acronyms: acronyms have invaded the sound space and are now the subject of a dedicated Larousse dictionary.
Coded vocabulary: one word replaces another. The administration speaks its own language, which only its agents can understand once they have obtained the C1 level in "administrative French".

ERASME | MÉTROPOLE GRAND LYON

INFRASTRUCTURE STATUS

#politics

Some services become intermittent due to repeated damage: trains, freeways and bridges are sometimes unusable for several months at a time.

Some essential infrastructures disappear for good, because it is financially impossible to repair them. The situation is exacerbating territorial inequalities and isolating entire regions.

Text source: AP 2042-Jeu Vraiment Vraiment

ERASME | MÉTROPOLE GRAND LYON

TRUST IN EXPERTISE

#politics

The list of experts who speak publicly is drawn up by the government.

End of state diplomas: All state diplomas are taken over, and everyone now follows the same training. To specialize, you have to be self-taught. One word is worth another, on all subjects.

POLICY

PLATFORMS DELOYAUTY

#politics

Uberization of public space. It's no longer possible to enjoy public space without something of value in return: data, financial remuneration, transmission of information, and so on.

All dematerialized public services are maintained by digital giants bound by framework agreements or delegation of services of common interest.

Source texte : AP 2042-Jeu Vraiment Vraiment

CONFLICTS ARMED

#politics

The erosion of natural capital through overexploitation is leading to economic and political instability.

Armed conflicts are emerging between many countries - even within major alliances. Policies are focused on the economy and local resources.

Source texte : AP 2042-Jeu Vraiment Vraiment

CRISIS ECONOMIC

#economy
#politics

Reduced international trade: protectionism, identity crisis. Inter-state trade deteriorates and becomes rare.

Savings are depleted, and cash is in short supply. Inflation brought the country to its knees. Citizens call on the State to react!

The euro no longer has enough value to continue serving as "currency".

Text source: AP 2042-Jeu Vraiment Vraiment

AVAILABILITY OF FOSSIL FUELS

#economy
#environment

Rising fuel costs: time to review spending priorities for more and more households.

Scarce resources: only urgency and fortune guarantee access to these raw materials. For the rest of humanity, it's time for alternatives.

ECONOMY

PROMISED LONGEVITY

#social

Bonus quarter-life: scientific advances promise us an extra 25 years of life. Synthesis and transmission tools are developing.

Faced with these challenges of time and quantity of information, AI is playing a growing role in learning and decision-making. Medicine, financed by transhumanist lobbies, is also becoming more unequal.

Text source: AP 2042-Jeu Vraiment Vraiment

MUTUALISATION

#social

The accessibility of resources and changing attitudes to everyday consumption are leading to the emergence of local initiatives to share goods, services and resources. Donation spaces are being set up at the foot of buildings, buildings are sharing their uses, and colleges are opening their parks in the evenings... For example, public infrastructures are welcoming these initiatives in their unoccupied time slots (functional polymorphism).

Text source: AP 2042-Jeu Vraiment Vraiment

TRUST IN INFORMATION

#social

The truth lies elsewhere: we're witnessing a massive increase in conspiracy theorists and skeptics of the information they disseminate.

The Truth is arranged: the State controls a very partial vision of reality. Collectives are organizing for the right to diversify opinions, new means of communication under the radar / emerging pirates.

Text source: AP 2042-Jeu Vraiment Vraiment

DEFIANCE IN SOCIAL TIES

#social

There is less and less empathy expressed for the situations of others. The logic of individualism and indifference takes root in everyday behavior.

The norm is not to trust. This is the logic in which children are raised. More than indifference, opposition becomes a reflex.

TRUST IN THE INSTITUTIONS

#social

Territorialized doubt: depending on the area, certain public services are sabotaged or boycotted.

The permanent conviction that every state action conceals a plot. There is no longer any sincere general interest.

Institutions are closed to the public, and join forces with the forces of law and order to guarantee their security.

LOGEMENT

#social

The multiplication of waves of immigration linked to political and environmental contexts, as well as a constantly growing population, are coming up against housing shortages in some cities. Students and young professionals are the hardest hit.

Architectes des bâtiments de France and PLU (plan local d'urbanisme) are revising their regulations downwards. Facades, roofs and gable walls are then adapted to accommodate extensions and elevations, thus reducing urban growth.

THE STREET REINVENTS ITSELF BY SLOWING DOWN

#social

The "zone de rencontre" status is becoming the norm in the city: pedestrians and vehicles cohabit in the same space in a peaceful manner.

The street tests out uses that extend the living space, and mixed-use spaces with shared management are institutionalized in front of each residential area. A variety of uses emerge: play, work, repair, exchange or training areas...

Source texte :
Erasme

ERASME | MÉTROPOLE GRAND LYON

CHANGING BEHAVIORS CITIZEN

#social

Public services are being rethought, and no longer provide certain urban services considered secondary, such as plant maintenance. Citizens and businesses join a list of shared initiatives: maintenance of fallow spaces, greening of parks, vegetable gardens, frontages, repair and recycling of objects...

SOCIAL

EPIDEMIC

#social

New animal diseases emerge every month.

Scientific researchers are overwhelmed. Confinement has become routine: the norm is to live permanently at home, considerably reducing human contact. Solidarity chains are set up within neighborhoods and buildings to perpetuate human contact. Shared housing is on the rise.

Text source: AP 2042-Jeu Vraiment Vraiment

WASTE

#environment

Waste (household, chemical, etc.) continues to grow, causing direct and unremediable impacts on biodiversity.

Public spaces are invaded by mountains of waste, even in the heart of major cities. Campaigns to prevent over-consumption at the start of the 21st century have failed. Second-hand and reconditioning trends and dynamics are becoming major environmental issues.

Text source: AP 2042-Jeu Vraiment Vraiment

EVOLUTION OF BIODIVERSITY

#environment

Species extinction is accelerating, with dozens of species disappearing every day, disrupting ecosystems.

The disappearance of species is accelerating movements to reconnect mankind with nature: decree of the right to a "pollution-free zone", annual fasting week, local ecotourism, observation registers for extinct flora and fauna... Advertising is now governed by the "donut" principle: it must fall between a sustainable ecological ceiling and a minimum social benefit.

Text source: AP 2042-Jeu Vraiment Vraiment

AVAILABILITY OF ELECTRICITY

#environment

Electricity has become an intermittent resource. Its cost is increasing due to its scarcity. This puts a strain on people's daily lives.

Electricity has simply become inaccessible. Only a privileged few still have access.

ENVIRONMENT

AVAILABILITY OF WATER

#environment

Drinking water is available in abundance, but only to those who can afford it: the disappearance of biodiversity has had an impact on the quality of water, which has to be treated before it can be consumed.

The regular disruption of individual water supplies has led to the re-establishment of shared public water points. Quotas have been devised.

Text source: AP 2042-Jeu Vraiment Vraiment

ERASME | METROPOLE GRAND LYON

DISPONIBILITÉS ALIMENTAIRES

#environnement

Partial and regular disruption of supply: access to certain foods becomes very difficult (soil degradation, increasing scarcity of imports and falling production).

The abundance of food is punctuated by the seasons (lack of water in summer, little diversity in varieties and therefore less robustness to disease/temperatures). 50% of the world's population is undernourished or deficient.

Food supplements are booming, and it's now possible to buy drinkable solutions that act as meals, to obtain as many nutritional properties as possible.

Text source: AP 2042-Jeu Vraiment Vraiment

ERASME | METROPOLE GRAND LYON

DESERTIFICATION

#environment

Overexploitation of water, deforestation and changes in land use are destroying habitats. Certain areas of the country have become too arid and are now deserted.

Life and habitat can only be found in a few well-defined areas that are not hostile to life, leading to migration.

Text source: AP 2042-Jeu Vraiment Vraiment

ERASME | METROPOLE GRAND LYON

EVOLUTION THE CLIMATE

#environment

All regions are affected by the destabilizing effects of climate change, while some have inherited frequent major disasters such as flooding.

Local collectives are inventing adapted lifestyles: massive water infiltration and planting vegetation in place of parking lots, using white paint and industrial tarpaulins for shade...

VOICE ASSISTANTS

#social

Everyday guides: voice assistants are part of our daily signage. They guide us, advise us and call us to order in public and private spaces.

Coach and shrink: voice assistants guide us in our life choices. They democratize access to psychotherapy, but generate a sharp drop in interaction.

Text source: AP 2042- Jeu Vraiment Vraiment

ERASME | METROPOLE GRAND LYON

ARTIFICIAL INTELLIGENCE (IA)

#innovation

Artificial intelligence, with a host of new automated applications in its wake, is disrupting most existing professions and organizations. Equipped with language, it is reexamining several areas of activity: - consulting (coaching) - creation, mediation and the press - management.

Faced with such changes, a moratorium has been adopted to certify certain environments or media as "AI-free" or with ethical AI. Mass information manipulation is becoming more widespread, and an ethical AI tribunal is soon to be set up to judge cases of AI influencing local behavior and narratives.

RELATIONSHIP MAN / MACHINE

#innovation

Digital assistants are becoming our preferred intermediaries for communicating with machines. They are taking over our lives and our privacy.

New interactions: a new generation of objects connected directly to our thoughts is invading our daily lives (housed in your body).

Text source: AP 2042-Jeu Vraiment Vraiment

AVAILABILITY OF COMMUNICATIONS

#innovation

Communicating via the Internet is becoming increasingly expensive: users are being taxed to pay for updates.

The Internet has serious flaws: networks are no longer able to handle the growing number of communications.

All network cables in the oceans are damaged and inaccessible: the global network is cut off.

Text source: AP 2042-Jeu Vraiment Vraiment

NEW MOBILITIES

#innovation

Except by special dispensation, cars are no longer allowed in the city, and are relocated to the outskirts. Only public transport and delivery vehicles circulate in the neighborhood: essential services are no more than 15 minutes from homes, and residents prefer walking and cycling.In this way, roads no longer constrain urban planning.

Text source: Erasme

SCARCITY OF RESOURCES

#environment

Faced with the proliferation of barren (lakes, valleys, underwater plains) or inhospitable territories, militant actions are multiplying against soil artificialisation or the mowing of private gardens, and self-managed ecological reserves and networks are developing...

The scarcity of water is giving rise to virtuous and innovative management methods: return of quotas, progressive pricing, aqua-responsible labels, public dry toilets and collective drinking fountains. Shortage of sand for concrete production leads to the development of new materials.
